

# Advanced Trial Monitoring

## Monitor trials efficiently and remotely while maintaining patient privacy.

Clinical trials incorporate a number of processes to ensure high-quality data collection. During one key process known as Source Document Verification (SDV), clinical trial monitors review and validate source documents from a trial site against the data collected in Electronic Data Capture (EDC) systems to ensure accuracy. This is often a highly manual, paper-based process, that can take focus and resources away from other critical areas.

Typically, SDV takes place at the trial site in order to protect patient privacy and limit the opportunity for sensitive Patient Health Information (PHI) to be exposed. However, with the onset of COVID-19, the ability of trial monitors to visit trial sites was greatly restricted, which meant a new, innovative SDV approach was needed.

Unqork empowers organizations to rapidly build and effectively manage custom trial monitoring software. These solutions allow trial managers to efficiently and securely conduct SDV—either remotely or on-site. Advanced technologies such as automated document scanning and NLP-driven redaction automate key tasks with machine efficiency, while robust Role-Based Access Control (RBAC) functionality ensures that trial data will only be reviewed by the relevant trial monitor before they are purged from the system.

### Key Benefits

- **Accelerated Trial Timelines:** Realize faster paths to revenue
- **Increased Operational Efficiencies:** Streamline processes and free-up capacity for mission-critical or high-touch processes
- **Enhanced Compliance:** Mitigate risk and penalties with proper workflow documentation and highly auditable digital trials

### Key Capabilities

#### Seamless Integrations

Freely (but securely) exchange data between existing legacy systems and external solutions

#### Document Management

Generate, manage, and store documents and make them available to all stakeholders

#### Easy Configurations

Easy to reconfigure systems and re-use for new trials

### About Unqork

Unqork is the industry pioneer no-code enterprise application platform that helps large companies build, deploy, and manage complex applications without writing a single line of code. Organizations like Goldman Sachs, Liberty Mutual, the Cities of New York and Washington, DC and Maimonides Medical Center are using Unqork's drag-and-drop interface to build enterprise applications faster, with higher quality, and lower costs than conventional approaches.
