

Unqork for Healthcare Providers

Rapidly develop in-demand digital experiences and provide value to all key stakeholders.

Facing an evolving regulatory environment, continued consolidation, and changing patient expectations, healthcare providers must adapt to the shifting care delivery landscape. However, meeting these challenges often means large capital expenditures, lengthy implementation cycles, or vendor point solutions that aren't well-tailored to the needs of individual providers.

Unqork is an enterprise no-code platform that has changed how software is created at many of the world's most complex organizations. Building sophisticated business processes and integrating with legacy systems is now a completely visual configuration exercise. Unqork's platform seamlessly integrates with existing legacy & third-party systems, making it easy for Providers to optimize clinical processes, surface critical data, maintain complex compliance standards, and deliver an end-to-end digital care experience to patients.

Key Benefits

- ✓ **Improve Quality:** Unqork empowers healthcare organizations to maintain a flexible digital infrastructure with **99.99% uptime** and **600x fewer defects** than code/low-code.
- ✓ **Move Faster:** Utilize every ounce of your IT budget to create, improve, and deploy digital experiences across your organization. **Go from ideation to production in as little as 12 weeks.**
- ✓ **Reduce Costs:** Reduce costs of initial builds & ongoing maintenance with **3x cost savings** versus the Total Cost of Ownership with a traditional code/low-code-based approach.

EXAMPLE PROVIDER SOLUTIONS

Unqork helps providers reimagine the enterprise application development process by building robust patient-, physician-, and administrator-facing solutions without writing a single line of code.

Digital Front Door (Portals)

Establish the digital front door of your organization, integrating legacy systems and existing clinical and business workflows. Empower patients to independently manage their care securely and efficiently.

Clinical Decision Support

Create digital workflows with business logic to trigger patient and provider actions, reviews and alerts. Ensure proper site of care and better patient outcomes.

Hospital @ Home

Build custom patient and provider workflows that integrate with best-in-class wearables and evidence-based protocols. Enable safe and affordable home-based monitoring for acute and post-acute care.

Patient Registration

Provide streamlined patient registration functionality through patient-facing digital hubs or guided on-site workflows. Increase patient retention with decreased wait times and improved experiences.

eForms

Enable a digital approach to the reviewing and signing of documents. Simplify this process by allowing it to be proactive and patient-driven.

Caregiver Tools & Case Management

Create a comprehensive, unified solution to efficiently manage care planning, patient engagement, operations, and reporting at the patient & population level.

SUCCESS STORY

A large urban hospital partnered with Unqork to decrease patient wait times and improve patient satisfaction.

A leading provider was looking for a way to improve the complete patient journey. They hoped to achieve this by transforming the processes of finding a physician, booking an appointment, and registering for a visit. They also wanted to reduce claims denials from improperly completed paperwork and improve patients' ability to access their medical record data.

The organization partnered with Unqork to develop a Digital Front Door for patients to support physician lookup, appointment booking, calendar integration, visit registration, and medical record access, providing omnichannel access to the entire patient journey.

Accelerated Speed-to-Market

With development cycles measured in weeks rather than months or years

Fully Digital Patient Registration

Seamlessly integrated with existing EMR systems

Reduced Costs

Of both operations and Total Cost of Ownership (TCO)

Decreased Claim Denials

Via automatic identification of incomplete or incorrect data

Unqork and the No-Code Revolution

No-code is a new class of cloud-based development platform that empowers organizations to rapidly build robust enterprise-grade software without writing a single line of code. Advanced no-code platforms such as Unqork come “out-of-the-box” (or out-of-the-virtual-SaaS-box) with all the toolsets and elements necessary to build and manage a robust application (e.g., front-end UX, workflow, rules engine, analytics, integrations, and maintenance). Since they’re all components of the same unified platform, everything works together in instant harmony. With no-code, organizations can devote all their development resources to addressing business challenges instead of technical ones.

Also, by eliminating the need to write code from the building process, no-code expands the scope of who is doing the development. In a no-code platform, users (or **‘Creators’** as we refer to them at Unqork) build applications by drag-and-dropping configurable elements representing both user-facing features and back-end application logic. While modern programming languages (Java, Python, etc.) can take a year to learn and a decade to master, no-code can be picked up in **just a few weeks**, making development more collaborative and recruiting more flexible.

Unqork: the World's First Enterprise No-Code Application Platform

Unqork is specifically designed to address the challenges of the world’s most complex and regulated service environments, including **financial services, insurance, healthcare, and government**. We levy decades of industry-specific experience from our in-house experts to take on each sector’s most critical challenges.

Unqork has backing from some of the world’s most disciplined investors, including Goldman Sachs, Capital G, and BlackRock. Our technologies have been adopted by leading organizations, including Liberty Mutual, Marsh, Pacific Life, Goldman Sachs, and the city of New York, just to name a notable few.

Our clients can achieve unparalleled speed and flexibility in their development function while requiring a fraction of the resources. We can deliver these benefits through:

A Unified SaaS Platform

Unqork boasts dozens of components and capabilities related to **compliance** (up-to-date rules engines for FATCA, UK CDOT, Dodd-Frank, and more), **security** (native encryption, RBAC, and crowd-sourced penetration tests), and **application management** (SDLC governance, historic versioning, and module management).

A Visual UI

Applications are built via an intuitive, visual User Interface (UI) featuring drag-and-drop components representing user-facing elements, backend processes, data transformations, third-party integrations, and a growing library of industry-specific templates.

Enterprise-Grade Standards

Unqork comes with enterprise-ready compliance (e.g., SOC2, GDPR, Privacy Shield compliant, etc.). We have complete security capabilities, including proprietary RBAC solutions, and we provide BCP and DR support for applications built on our platform.
